

Experis Cyber/ Orian

Company Founded in 1953, Orian Ltd. is one of the leading logistics services companies in Israel. The company offers worldwide logistics services, has a strategic relationship with DB SCHENKER and is traded on the Tel-Aviv Stock Exchange. Orian is a One Stop Shop, offering a wide range of supply-chain management solutions and guarantees a perfectly timed delivery. Their goal was to protect their assets from potential security incidents, including thousands of clients, 900 employees, two large logistic centers, and 5 distribution centers across Israel.

Problem Orian recognized that in a world of ever-evolving cyber threats they were missing critical expertise. The company needed to find a way to identify and respond to potential security events without disrupting their daily activities and within reasonable cost limits.

The company did not have clear visibility of the entire network. Each device generated a large amount of logs and threat alerts, requiring dedicated resources for monitoring and management. Struggling without unified management for multiple security devices, the company found it was almost impossible to monitor and respond to cyber threats properly.

Solution Experis Cyber's team started by analyzing the risks and vulnerabilities, creating a threat map for systems and devices across the organization. They continued by mapping every network asset in the organization, including mobile devices and the existing perimeter defense architecture.

After analyzing all the information and available technologies, the Experis Cyber team recommended a top-notch solution based on the IBM QRadar platform delivered as a service from Experis Cyber's advanced iSOC (Intelligent Security Operation Center). To improve precision and response time, the solution included an Artificial Intelligence component integrated into the forensic phase of the risk analysis process.

The solution was adapted to Orian's needs and integrated into their environment with clear incident response procedures and well-defined SLA to ensure a level of service that the customer can depend on.

Results Experis Cyber's iSOC and expert team is able to monitor, analyze and respond to cyber threats and events occurring within Orian's systems.

Within eight weeks, Orian went from dealing with millions of logs each month that triggered many security alerts, to responding only to a limited number of cyber threats that require their team's involvement.

The company's systems are monitored by the most advanced cyber security service with an expert team that identifies and analyzes threats and acts according to clear incidence response procedures.

With unified management controlling every device in their system, the company has complete visibility over the entire network, and a defined SLA that ensures timely service.

The CISO and IT Manager at Orian use a convenient management interface that presents all the relevant data to facilitate a clear understanding of cyber events and required actions.

The Experis Cyber team of experts and analysts is available for consultation and direction 24/7, giving Orian access to expertise that is rarely achieved within the organization.

The Benefits

- / Quick implementation time: incident reporting procedures implemented within 8 weeks
- / Control and monitor the entire network
- / Access to top notch security experts and analysts
- / Resource optimization - deal only with the threats that truly need remedy
- / Clear and comprehensive reports
- / Regulation compliant
- / Cost effective solution: ~40% TCO

About Experis Cyber

Experis Cyber is a provider of cyber-security services (MSSP). We provide cutting-edge cyber security services from iSOC (Intelligent SOC integrating Artificial Intelligence), into the cyber-security operation center, manned 24/7/365 by security experts, analysts and architects. Our cyber-security services provide extensive cyber protection for any device, at any place, and at any time.
